

Codex + Blueprint Factory Video Playlist

Research date: 2026-06-29

Use this for onboarding new Blueprint Factory builders. This is a curated, lean playlist: official Codex essentials first, then preferred channels for agent workflow, AI coding habits, and product judgment.

Hard Rules

- Prefer videos published on or after 2026-03-29.
- Allow 2025-12-29 through 2026-03-28 only for official Codex material or stable workflow concepts.
- Do not use Figma-required videos, Figma workflows, or Figma-first channels for this onboarding path.
- Re-check this file monthly. Codex changes fast enough that old tutorials can train the wrong habits.

How To Use This Playlist

Give new builders the Codex essentials first, then the three preferred-channel blocks. They should watch with this repo open, not as passive homework.

After each block, they should do one small factory exercise:

- Ask Codex to explain this repo and summarize the factory rules.
- Run a Blueprint Factory status check on an existing site.
- Find a strong donor site and write a donor topology.
- Make one small visual improvement and capture before/after screenshots.

They should read these local docs alongside the videos:

- `AGENTS.md`
- `README.md`
- `factory/playbooks/blueprint-factory-callbook.md`
- `factory/playbooks/reference-first-build.md`
- `factory/playbooks/green-pastures-pack.md`
- `factory/qa/beauty-pass-rubric.md`

Core Codex Essentials

Keep this block small and official. These are the "what is Codex and how should I think about it" videos.

1. [Introducing Sites in Codex](#) - OpenAI, 2026-06-05
 - Watch for: how Codex handles web/app surfaces and preview-style workflows.
2. [How PMs use the Codex app](#) - OpenAI, 2026-02-09
 - Watch for: turning product intent into concrete work for Codex.
3. [Multitasking with the Codex app](#) - OpenAI, 2026-02-06
 - Watch for: parallel work, task boundaries, and review checkpoints.
4. [Automate tasks with the Codex app](#) - OpenAI, 2026-02-03
 - Watch for: repeatable task delegation and follow-through.
5. [OpenAI Codex docs](#) - OpenAI, living docs
 - Not a video, but required. Use this when any video conflicts with current product behavior.

Matthew Berman: Agent Workflow And Loops

Use this block to help new builders understand agent loops, tool discovery, and the broader AI-agent world without turning onboarding into generic hype.

1. ["The best thing since OpenClaw" \(Hermes Tutorial\)](#) - Matthew Berman, 2026-06-28
 - Watch for: quick setup mindset, tool orchestration, and why agent workflows are becoming normal.
2. [You NEED to try these 12 open-source AI projects RIGHT NOW](#) - Matthew Berman, 2026-06-24
 - Watch for: how to scout useful tools before building from scratch.
3. [7 INSANE loops you need to try right now](#) - Matthew Berman, 2026-06-19
 - Watch for: loop thinking, bounded iteration, and repeatable agent workflows.
4. [I figured out the best way to vibe code](#) - Matthew Berman, 2026-06-18
 - Watch for: how to steer an AI coding session without letting it wander.
5. [Only the best are using them...](#) - Matthew Berman, 2026-06-09
 - Watch for: the practical value of loops and repeatable patterns.

Robin Ebers: AI Coding Discipline

Use this block for the habits we want inside Blueprint Factory: prompt clarity, review discipline, smaller steps, and not trusting AI output blindly.

1. [5 Things I Wish I Knew Before I Started AI Coding](#) - Robin Ebers, 2026-06-11
 - Watch for: beginner mistakes and practical guardrails.

2. [Why I Switched Back to Claude Code](#) - Robin Ebers, 2026-06-03

- Watch for: judging tools by workflow fit, not brand loyalty.

3. [STOP Reviewing AI Code Yourself \(Use THIS\)](#) - Robin Ebers, 2026-05-14

- Watch for: using AI/code review loops to catch weak output.

4. [Why I Trust This AI to Build Apps for My Business](#) - Robin Ebers, 2026-04-30

- Watch for: when to trust the agent, when to verify, and how to keep business context visible.

5. [3 Prompt Mistakes That Kill 97% of AI Apps](#) - Robin Ebers, 2025-12-18

- Boundary item: keep only while it remains inside the six-month rule.
- Watch for: prompt mistakes that create fragile, generic apps.

Starter Story: Product And Customer Judgment

Use this block to keep builders grounded in real businesses. Blueprint Factory sites should not just look good; they should support a clear offer, audience, conversion path, and operational reality.

1. [We Built This \\$20K/Month App While In College](#) - Starter Story, 2026-06-28

- Watch for: simple product thinking and how small teams ship.

2. [I Turned This Spreadsheet Into a \\$30K/Month Micro-SaaS](#) - Starter Story, 2026-06-24

- Watch for: turning a boring workflow into a clear product.

3. [I Built a \\$10K/Month App With This One System](#) - Starter Story, 2026-06-21

- Watch for: repeatable systems, not one-off cleverness.

4. [I Built A \\$30K/Month App: Here's My Exact Process](#) - Starter Story, 2026-05-31

- Watch for: customer-first process and offer clarity.

5. [I Built A Micro-Version Of A \\$1B SaaS. Now I Make \\$50K/Month](#) - Starter Story, 2026-05-28

- Watch for: niche selection and focused scope.

Channels To Watch

Sort by newest first and keep the same freshness rule.

- [OpenAI Developers / Codex videos](#)
- [OpenAI Codex docs](#)
- [Matthew Berman](#)
- [Starter Story](#)
- [Robin Ebers](#)

Blueprint Factory Training Prompt

After the playlist, give each new builder this prompt inside the repo:

Read AGENTS.md, README.md, factory/playbooks/blueprint-factory-callbook.md, factory/playbooks/reference-first-build.md, and factory/qa/beauty-pass-rubric.md.

Then explain the Blueprint Factory workflow to me as a checklist:

1. How to start a normal high-craft website.
2. How donor-first cloning works.
3. What files every site must have.
4. What proof is required before a site is ready.
5. What you must ask before deploying or making major art-direction changes.

Then give them this practical exercise:

Pick one existing site under sites/.

Inspect the current factory state.

Find the next missing gate.

Do not edit yet.

Tell me the smallest useful next action and what proof you would collect.

What Good Looks Like

A trained builder should be able to say:

- Codex needs clear task boundaries, repo context, and verification.
- Blueprint Factory starts with a visual donor, not blank-page invention.
- The first pass clones structure and craft; the second pass translates brand, copy, assets, and goals.
- We do not use Figma as part of this factory onboarding path.
- Every site needs brief, art direction, asset log, deploy notes, screenshots, and visual review.
- Agent loops are useful only when they are bounded and reviewed.
- A task is not done until the build, screenshots, motion evidence, and Beauty Pass prove it.
